

GNSS Module GNS410sLP/ GNSS Module GNS413sLP

Datasheet V1.5

confidential information preliminary specification

1 INTRODUCTION

GNS410sLP / GNS413sLP module provide a high performance and super low power multi-GNSS solution in a small form factor.

GNS410sLP / GNS413sLP integrate a complete GNSS receiver enabling RF to NMEA solutions that minimize the load on the host processor.

Features

- High performance small GNSS module for power critical applications
- GNSS tracking&navigation sensitivity: -161dBm
- Low load on host CPU
- Standard NMEA0183 interface
- Precision PPS Output
- Low power consumption (22.5mW at GPS 8-ch tracking)
- I/O voltages 1.8V (GNS410sLP) or 3.3V (GNS413sLP)
- Core voltage 1.8V
- Miniature 36 pin module (10x9.3x2.0) mm
- Evaluation Boards:
 - GNS41x Starter Kit for testing on a PC

Applications

- Navigation
 - In-vehicle Navigation equipment
 - Dynamic Navigation
 - Portable ("nomadic") devices
 - Netbooks, tablet PCs and mobile phones
- Timing
 - Precision timing via GNSS
- Location based applications
 - GPS Logger
 - GPS Tracker
 - Security devices
 - Camera equipment

GNSS Module GNS410sLP/ GNSS Module GNS413sLP

Datasheet V1.5

confidential information preliminary specification

3 DETAILED FEATURES

3.1 Block diagram

3.2 GNSS Features

- A multi-GNSS receiver for GPS, GLONASS, SBAS, QZSS, BeiDou and Galileo
- Ultra-low power consumption
- Embedded NVM (8 Mbit MRAM), no backup battery needed
- Standard NMEA output
- Precision 1PPS output
- GNSS Fix indication output pin

GNSS Module GNS410sLP/ GNSS Module GNS413sLP

Datasheet V1.5

confidential information preliminary specification

4 TYPICAL APPLICATION BLOCK DIAGRAM

5 SYSTEM REQUIREMENTS

GNS41xsLP includes a complete GNSS engine.

- GNSS is fully processed without any host processing requirements
- Standard NMEA message output from the solution to the host
- RTC crystal clock (32.768kHz) should be applied externally.

5.1 Real time clock (RTC)

RTC counter maintains GNSS time and is used for the system wakeup/sleep timer function. Its clock sources are the internal RC oscillator **or** the RTC_CLKI pin with 32.768 kHz. See chapter 7.7 *RTC Clock characteristics* for more details.

5.2 I/O levels

GNS41xsLP **core** works at 1.8V nominal. **I/O section** works on either 1.8V (GNS410sLP) or 3.3V (GNS413sLP). Absolute Maximum Ratings should not be exceeded.

Digital pins are in **failsafe mode** when the interface (VDD_IO and VCORE) power is not supplied (VBAT power must be less than 50 mV. Hi-Z is NOT acceptable). If the pins are in **failsafe mode** and connected to 1.95 V, protection circuits prevent any unwanted leak current from the pins.

GNSS Module GNS410sLP/ GNSS Module GNS413sLP

Datasheet V1.5

confidential information preliminary specification

6 DESCRIPTION OF FUNCTIONS

6.1 Supported Satellite Systems

- GPS (L1 C/A)
- GLONASS (L1OF)
- QZSS (L1 C/A)
- SBAS (L1 C/A)
- BeiDou (B1)1
- Galileo (E1 CBOC)1

6.2 GNSS characteristics

Position Accuracy

Item	GPS	GPS & GLONASS	Unit	Remarks
2DRMS	1.0	1.0	m	Signal strength is -130 dBm

Time-To-First-Fix (TTFF)

Item	GPS	GPS & GLONASS	Unit	Remarks
Cold Start	35	35	s	Signal strength is -130 dBm
Hot Start	2	2	s	

Sensitivity

Item	GPS	GPS & GLONASS	Unit	Remarks
Cold Start	-147	-147	dBm	
Hot Start	-160	-160	dBm	
Tracking	-161	-161	dBm	

Noise Filter

An embedded noise filter for GNSS signals. It is automatically enabled at the optimum settings for the input noise.

RF Performance

Item	Min.	Typ.	Max	Unit	Remarks
Total NF		3		dB	

GNSS Module GNS410sLP/ GNSS Module GNS413sLP

Datasheet V1.5

confidential information preliminary specification

6.3 Power-on reset

An internal power-on reset circuit enables autonomous startup without external reset control by the system. To avoid malfunction in boot-up, power-off state must be more than 100 ms. The internal reset is generated from the power-on reset & the external reset (the NRESET pin).

6.4 RTC clock

RTC counter maintains GNSS time and is used for the system wakeup/sleep timer function. Its clock sources are the internal RC oscillator **or** the RTC_CLK pin with 32.768 kHz.

Because the clock from the RC oscillator is calibrated for the RTC counter but it may have frequency drift by temperature during sleep states, the sleep time also may be drifted. Below figure shows the frequency drifts by temperature around 25 °C at stabled input voltage.

It is recommended to use the external crystal RTC_CLK to reduce the temperature dependence of the RTC counter.

GNSS Module GNS410sLP/ GNSS Module GNS413sLP

Datasheet V1.5

confidential information preliminary specification

6.5 Interface

The UART interface consists of the connections UART_TX, UART_RX and UART_CTS. The UART interface is used to output NMEA data and to exchange commands and system settings. The interface voltage of the UART interface is VDD_IO (GNS410sLP: 1.8V / GNS413sLP: 3.3V).

6.6 Pulse Per Second (1PPS)

GNS41xsLP provides a so called Pulse Per Second (PPS) for timing purposes. After calculation of a 3D position fix, the PPS signal is accurately aligned to the GPS seconds boundaries. The pulse generated is approximately 1 millisecond in duration and the repetition rate is 1 second.

6.7 Fix Available

The *FIX_AVAILABLE* signal is used to indicate the availability of GPS position information. This is typically used to drive an LED buffer so that the state of the device can be easily indicated. The table below lists the various states.

Fix Available Signal	
State	Indication
Initial boot up	low
acquisition	low
position fix	continuously high

GNSS Module GNS410sLP/ GNSS Module GNS413sLP

Datasheet V1.5

confidential information preliminary specification

6.8 GPS Power Management

6.8.1 State Transition

There are some states in the GNS41xsLP operations as shown in the following diagram

State	GNS41xsLP				
	GNSS	CPU	Always-on block	Backup RAM	Main RAM
S0: Exec	Operation	Operation	Operation	Hold	Hold
S1: Idle	Standby	Operation	Operation	Hold	Hold
S2: Sleep0	Power-off	Power-off	Operation	Hold	Hold
S3: Sleep1	Power-off	Power-off	Operation	Hold	Power-off
S4: Sleep2	Power-off	Power-off	Operation	Power-off	Power-off

6.8.2 State Description

S0: Exec

GNSS positioning can be performed.

S1: Idle

This is a command waiting state. The system can accept commands but power consumption is managed to be low.

S2: Sleep0

The GNS41xsLP holds program code, data and satellite date but other logic circuit is powered off. The GNS41xsLP can wake up from this state without loading the data from an embedded NVRAM or an external FLASH memory or the system MCU.

S3: Sleep1

Because the GNS41xsLP holds satellite data only in this state, it must load program data from an embedded NVRAM or an external FLASH memory or the system MCU for wake-up but it can get a position with hot start.

S4: Sleep2

In this state, the GNS41xsLP is powered off except an internal PMU and always-on block.

**GNSS Module GNS410sLP/
GNSS Module GNS413sLP****Datasheet V1.5***confidential information preliminary specification***6.9 GPS Antenna**

GNS41xsLP contains all input circuitry needed to connect a passive GPS antenna directly. Depending on the application patch- or chip antennas or combo antennas (combination of GPS and Bluetooth) can be used. However, if there is a long wire between RF_IN RF input and antenna, there should be an LNA (on the antenna side) to compensate for cable losses ("active" antenna). For active antenna configuration, the antenna supply DC must be blocked from the antenna signal line with a inductor **L** of 100nH and a 100pF capacitor **C** as shown in the diagram below.

More information about connecting and implementing a GPS antenna to an application PCB, please refer to **GPS Antenna Connection Design Guide**.

8.1 Pin Description

NO	NAME	TYPE ¹	DESCRIPTION
Power-Management Signals			
2F	VDD_IO	P	GNS410sLP : 1.8V I/O power supply voltage GNS413sLP : 3.3V I/O power supply voltage
1F	VCORE	P	1.8V main power supply voltage (GNSS core voltage)
3D	GND	P	Common Ground
2E	GND	P	Common Ground
3C	GND	P	Common Ground
Clock Signals			
1E	TCXO_CLKO	O2	TCXO_CLK signal output. This Pin delivers the high stable TCXO frequency of 26.000 MHz for external components. Although the output is buffered, do not load this pin below 20kOhms // 10pF (TBD). Leave open if not used.
6F	RTC_CLKI	I2	Clock input: 32.768 kHz. External input for internal RC oscillator. The RTC_CLKI should be tied with GND if an external RTC clock isn't used.
GPS Signals			
3A	RF_IN	ANA	GNSS RF Input, direct connection of passive or active GNSS antenna
2A	RF_GND	ANA	GNSS RF Ground
4A	RF_GND	ANA	GNSS RF Ground
6B	1PPS_OUT	O1	This output delivers a high-precision pulse-per-second signal that is synchronized to the GNSS time reference. The pulse precision is better than 1×10^{-7} seconds. Leave open if not used.
6A	BOOT_REC	I2	BOOT Recovery Pin. The pin is used to start the internal bootloader. Tie to GND during normal operation.
5A	FIX_AVAILABLE	O1	This pin indicates a fix position. Leave open if not used.
5F	NRESET	I2	Reset input, LOW active. Pull up (or leave open) during operation.
UART			
3F	UART_TX	O1	Main UART TX.
4F	UART_RX	I1	Main UART RX.
3E	UART_CTS	I1	Main UART CTS.
NOT USED PINs			
1A	NU_1A		Not used , internally not connected
1B	NU_1B		Not used , internally not connected

9 HARDWARE HOST INTERFACE

GNS41xsLP is connected to the host system via a UART. NMEA data but also commands and responses are transmitted via this interface.

The interface voltage domain is VDD_IO.

The idle state of the lines is positive voltage. To interface a standard RS232 UART (e.g. a PC serial interface), please add an inverting level shifter. To interface processors that have a different interfacing voltage level, level shifters are required.

9.1 GPS UART Interface details

- The UART interface is used to send NMEA messages and control data.
- The default baud rate is 9600, other baud rates can be selected by ordering option.

GPS UART Default Settings

Parameter	Value
Baud rate	9600
Data length	8 bits
Stop bit	1
Parity	None

9.2 GPS UART AC characteristics

GPS UART Error Tolerance

Item	Symbol	Min.	Typ.	Max	Unit	Remarks
UART Error Rate (except TX @ 115.2 kbps)	R _{BRT_ERR}	-1		1	%	Terr_RX / tRATE_IDEAL Terr_TX / tRATE_IDEAL
UART Error Rate (TX @ 115.2 kbps)	R _{BRT_ERR_FD_TX}	-4		4	%	Terr_TX / tRATE_IDEAL

18 CUSTOMER SPECIFIC FACTORY OPTIONS & part# assignment

Some features of GNS41xsLP are factory presets, that should be added to your order information. Customers should define the options with the help of the following options table.

**In case of an order, GNS will assign a new part#, then.
This part# is valid for all following orders.**

Customer specific ordering options				
Type	Default Value	options	Short	note
UART baudrate	9,600 baud	Baud=9600bps Baud=19200bps Baud=38400bps Baud=57600bps Baud=115200bps Baud=230400bps Baud=460800bps	9 19 38 57 115 230 460	The serial output baud rate.
GPS output rate	1 second	Rate is x seconds (x=1,2,3,4,5,10, 30,60)	R<x>	This option is useful to optimize transfer times by lowering the rate of NMEA messages. Has no influence on the GPS engine activity.
NMEA selection	All 6 types	All combinations possible	RMC GGA GSV GLL GSA VTG	saving unused NMEAs. Please specify all types that should be available.
GSV output rate	1	GSV=1 GSV=5	G1 G5	GSV rate can be selected as a <u>multiple</u> of the GPS output rate. This option is used to reduce average data transfer. G5 with a rate of 1 will produce GSV output every 5 seconds.
Pulse per second output	active (on)	PPS on PPS off	/P	Activates or deactivates the hardware precision pulse per second. Since active is default, please define /P (no PPS) if PPS should not be available.

Just replace <options> by the **Short** options given in the table below.
Please use a semicolon ";" for separating the options.

Notes:

GNSS Module GNS410sLP/ GNSS Module GNS413sLP

Datasheet V1.5

confidential information preliminary specification

- 1. You do not need to specify option values that are shown to be default.**
- 2. If you do not wish any customized options, the part# will be the above mentioned default: 4037735106147 resp. 4037735106161**

For example, if you wish to have a baudrate of 115.2k, and only RMC (once per second) and GSV (every 5 seconds) as output data, please order as follows : ***GNS410sLP 115;RMC;GSV;G5***

In another example, Baud Rate is 38400bps, all NMEA sentences except GSV and VTG should be sent at a rate of once per 5 seconds: ***GNS410sLP 38;RMC;GGA;GLL;GSA;R5***

19.1 Quality and Environmental Specifications

Test	Standard	Parameters
PCB Inspection	IPC-6012B, Class 2. Qualification and Performance Specification for Rigid Printed Boards - Jan 2007	
Assembly Inspection	IPC-A-610-D, Class 2 "Acceptability of electronic assemblies"	
Temperature Range	ETSI EN 300 019-2-7 specification T 7.3	-30 °C, +25 °C, +85 °C, operating
Damp Heat	ETSI EN 300 019-2-7 specification T 7.3	+70 °C, 80% RH, 96 hrs, non-operating
Thermal Shock	ETSI EN 300 019-2-7 specification T 7.3 E	-40 °C ... +85 °C, 200 cycles
Vibration	ISO16750-3	Random vibration, 10~1000Hz, 27.8m/s ² , 8hrs/axis, X, Y, Z 8hrs for each 3 axis non-operating
Shock	ISO16750-3	Half-sinusoidal 50g, 6ms, 10time/face, ±X, ±Y and ±Z non-operating
ESD Sensitivity	JEDEC, JESD22-A114 ESD Sensitivity Testing Human Body Model (HBM). Class 2 JEDEC, JESD22-A115 ESD Sensitivity Testing Machine Model (MM), Class B	+2000V - Human hand assembly +250V - Machine automatic final assembly
Moisture/Reflow Sensitivity	IPC/JEDEC J-STD-020	MSL3
Storage (Dry Pack)	IPC/JEDEC J-STD-033C	MSL3
Solderability	EN/IEC 60068-2-58 Test Td	More than 90% of the electrode should be covered by solder. Solder temperature 245 °C ± 5 °C

Moisture Sensitivity

GNS ships all devices dry packed in tape on reel with desiccant and moisture level indicator sealed in an airtight package. If on receiving the goods the moisture indicator is pink in color or a puncture of the airtight seal packaging is observed, then follow J-STD-033 "Handling and Use of Moisture/Reflow Sensitive Surface Mount Devices".

Storage (Out of Bag)

The GNS41xsLP modules meet MSL Level 3 of the JEDEC specification J-STD-020D – 168 hours Floor Life (out of bag) ≤30 °C/60% RH. If the stated floor life expires prior to reflow process then follow J-STD-033 "Handling and Use of Moisture/Reflow Sensitive Surface Mount Devices".

20 DOCUMENT REVISION HISTORY

V1.0	Mar 13 2020	M.Heinzel	initial
V1.1	Mar 18 2020	M.Heinzel	Corrections in feature list (page1) & chapter 7.5 (current consumption)
V1.2	Mar 26 2020	M.Heinzel	Corrections in chapter 7.2 (Recommended Operating Conditions) Corrections in chapter 3.1 (Block diagram)
V1.3	Apr 6 2020	M.Heinzel	Chapter 3.1 Block Diagram : LNA added Corrections in Chapter 7.1 Absolute Maximum Ratings Corrections in Chapter 9 Hardware Host Interface
V1.4	May 14 2020	M.Heinzel	Chapter 7.1 Vcore Voltage corrected Chapter 7.7 RTC Clock Characteristics added
V1.5	May 26 2020	M.Heinzel	Corrections in feature list (page1)

21 PACKAGING

1 reel		
contents	2,000pcs	
GNS part#	2 x 6550000003 1x 6550000011	
dimensions	dia: 330mm thickness:30.4mm	
gross weight	1.195 Kg	with full contents
net weight	0.246 Kg	
2 vacuum bag		
GNS part#	6550000006	
dimensions	400mm x 480mm	
gross weight	1.321 kg	with full contents
net weight	0.068 Kg	
air pressure level	<30mbar	
3 moisture indicator		
GNS part#	6550000008	
dimensions	76mm x 51mm	
weight	0.001 Kg	
4 dry pack		
GNS part#	6550000007	
dimensions	145mm x 140mm	
weight	0.068 Kg	
5 Box for reel		
GNS part#	6550000012	
dimensions	350 mm x 350mm x 47mm	
gross weight	1.5357 kg	with full contents
net weight	0.184 kg	
6 Outer box		
contents	max 7 box for reel	(14,000 pcs GNS41xsLP)
dimensions	400mm x 370mm x 360mm	
gross weight	11.6 kg	with full contents
net weight	0.85 kg
